ENERGY · AUTOMATION · AI · CYBERSECURITY

Renewable Energy Technology & Engineering Solutions Partner

Supporting energy and industrial organizations with digital engineering, intelligent automation, AI-driven solutions, and specialized technical expertise.

PLC | SCADA | Industrial Automation | Digital Twin | HIL & Simulation | AI & IoT | OT Cybersecurity

Engineering expertise. Intelligent technology. Reliable delivery.

arkvvaa.com solutions@arkvvaa.com

WHO WE ARE

Engineering-led. Technology-driven. Focused on energy and industry.

We are a technology and engineering solutions company helping energy and industrial organizations address practical challenges through digital engineering, intelligent automation, AI-enabled applications, cybersecurity and specialized technical expertise.

Our approach brings together domain understanding, engineering execution and technology integration. We work with customers to define requirements, identify suitable solutions, validate implementation and support delivery.

Mission

To enable energy and industrial organizations to adopt reliable, secure and intelligent technology through engineering expertise and practical execution.

Vision

To become a trusted engineering and technology partner for organizations advancing energy systems and industrial digitalization.

WHAT WE DELIVER

Five solution areas and one product

Digital Engineering & Transformation

Connect engineering systems, operational technology and digital applications to improve visibility, productivity and decision-making.

- PLC and SCADA engineering
- Industrial automation and IoT
- System modernization and analytics

Digital Twin, HIL & Simulation

Virtual models and controlled test environments for engineering analysis, controller validation and pre-deployment verification.

- Digital twins of assets and processes
- Hardware-in-the-loop testing
- Model-based engineering

AI & Intelligent Applications

AI and analytics that organize engineering data, surface patterns and automate selected workflows, with human review in focus.

- Condition and anomaly detection
- Predictive-maintenance support
- Document and evidence analysis

Energy Cybersecurity & Compliance

Support for power and energy organizations working towards CEA cybersecurity requirements, backed by our platform GridKavach AI.

- CEA, IEC 62443 and NIST mapping
- Assessments and gap analysis
- Evidence workflows and reporting

Engineering Workforce Solutions

Specialized engineering and technology professionals, from individual specialist roles to dedicated project teams.

- Staff augmentation
- Dedicated engineering teams
- Contract and permanent hiring

ACROSS RENEWABLE ENERGY

Wind energy

Turbine and plant monitoring integration, SCADA workflows, controller and system validation, dashboards and cybersecurity assessment.

Solar energy

Plant monitoring, SCADA integration, inverter and control-system data workflows, performance analytics and cybersecurity support.

Power & utilities

OT architecture, monitoring integration, compliance assessment, system modernization and technical workforce augmentation.

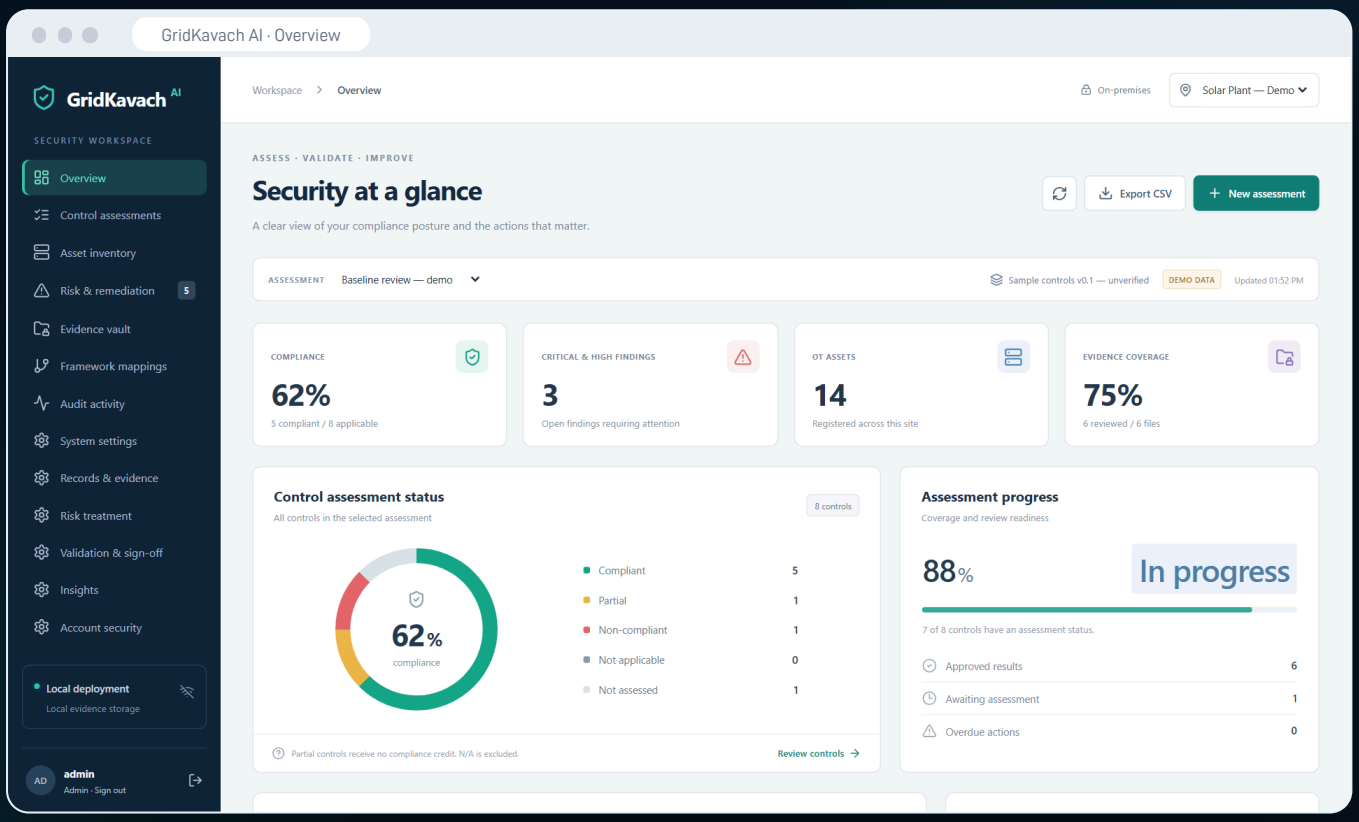

OUR PRODUCT

GridKavach AI

AI-Enhanced CEA Cybersecurity Compliance & Assessment Platform

Organize cybersecurity requirements, assess implementation status, map controls to relevant frameworks, track gaps, manage evidence and prepare consistent reports for power and energy sites, in one structured workflow that runs on your premises.

- On-premises and offline
- Human-validated AI
- Evidence integrity
- Two-person review

Real product screen from a demo site with training data. Figures shown are not customer results.

ONE STRUCTURED WORKFLOW

01 Control pack
Versioned CEA requirements

02 Assets
OT and IT inventory, zones and conduits

03 Evidence
SHA-256 integrity and freshness

04 Findings
Owners, deadlines, verified closure

05 Mappings
MITRE ATT&CK for ICS, IEC 62443

06 Report
Reviewer sign-off, CSV and PDF

What teams get

Executive overview
Compliance counts only reviewed, approved evidence.

Risk & remediation
Gaps become owned actions with deadlines and risk scores.

Zones & conduits
Purdue levels, target security levels and approved paths.

Evidence assistant
Cited passages from reviewed evidence. AI suggests, your experts decide.

Security built in, not bolted on

Role-based access
Admin, Reviewer, Assessor and Auditor roles.

Two-factor sign-in
MFA with recovery codes.

Tamper-evident audit trail
Sealed, exportable history of every decision.

SBOM import & signed offline licence
CycloneDX and SPDX. Works without internet.

GridKavach AI supports assessment, documentation and reporting. Findings and conclusions are reviewed by qualified users. Use of the platform does not by itself certify compliance or imply approval by the CEA or any regulator.

HOW WE DELIVER

A disciplined path from requirement to support

1. **Discover**
   Objectives, requirements, constraints and success criteria.
2. **Assess**
   Current systems, architecture, data, risks and readiness.
3. **Design**
   Architecture, scope, interfaces, milestones and acceptance.
4. **Build or integrate**
   Develop, configure, integrate or provide resources.
5. **Test and validate**
   Agreed test cases, results and acceptance criteria.
6. **Deploy and hand over**
   Deployment, knowledge transfer and documentation.
7. **Support and improve**
   Agreed support, issue resolution and improvements.

ENGAGEMENT MODELS

Work with us the way your project needs

- **Project-based technical services**
  A work package with agreed deliverables.
- **Dedicated engineering team**
  A client-aligned team for ongoing work.
- **Staff augmentation**
  Specialists who join your team.
- **Contract, contract-to-hire and permanent**
  Hiring support for direct roles.
- **Remote, onsite or hybrid**
  Based on project and client needs.

TECHNICAL TALENT

Specialists across energy and technology

From individual specialist roles to dedicated project teams, with requirement clarity, relevant screening and responsive coordination.

- PLC, SCADA & automation
- Embedded & power systems
- Digital twin & HIL
- Software, cloud & data
- AI / ML engineering
- OT cybersecurity & GRC
- Wind & solar professionals
- Testing & commissioning
- Project & business roles

WHY WORK WITH US

An engineering partner that tests what it hands over

- **Energy and industrial technology focus**
- **Engineering-led problem solving**
- **Flexible project and team models**
- **Integration, testing and validation mindset**
- **Specialized technical expertise**
- **Clear communication and delivery governance**

Let’s discuss your project

Tell us about your engineering challenge, cybersecurity requirement or technical resource need, or book a GridKavach AI demonstration.
